

DPZ-mobile Mobile Digital Access Counting System

Digital red/green light system to comply with legal regulations.

Fully automated digital people counting system with an integrated smart counting sensor. Quick and easy installation. Fast return on investment.

Sensor Pillar

Mobile Digital Access Counting System from Sensotek to secure control over restricted number of people in shopping places, petrol stations, retail with customer traffic, authorities, museums, gyms, etc.

Sensotek provides full coverage of the segment of people counting systems with its new product, i.e. the mobile digital access counting system, in order to minimize the infection risks.

An LCD touch screen with the expressive optical and acoustic signal display informs customers about the number of people and the current access possibilities.

As soon as the maximum number of people is reached a red/green optical signal provides the visualized information about the number of people inside. Acoustic alert is optional.

The mobile Sensotek pillar is installed and put into operation at the entrance area indoors or covered outdoors without a breach of the regulations for emergency exits. The integrated sensor technology passively detects the customer flow in both directions with high precision.

Plug & Play. All you need is a 230 V power supply point! Quick set-up and power connection, enter the PIN-Code and maximum number of customers via the LCD touch Screen and the system is ready for operation.

Fast return on investment. The digital access control system requires a single investment and can be set up in a short time. After the set-up you can focus back on your day-to-day business.

Housing open

Highlights

- Safe installation to the left or right of the door without endangering people in the emergency exit areas.
- Counting of all coming and leaving people to implement the legal regulations.
- Visualized red/green access signal with counting
- Information on the number of people in the shopping areas via the integrated LCD Touch Screen
- Integrated high-quality and reliable state-of-the-art counting sensor for passive bidirectional counting
- Plug & Play.
All you need is a 230 V power supply point!
- WLAN
- **Optional**
Battery mode
Acoustic alert in case of access detection above the limit

Technical Data

Power supply:	Power adapter AC 100 – 240 V – 50 – 60 Hz
Detection area of the counting sensor:	Standard approx. 3 m counting distance
Display:	1920 x 1080 pixels
Brightness:	220 cd/m ²
Repeat time:	2,5 ms
Dimensions:	Height DPZ-mobile: 1125 mm Width DPZ-mobile: 257 mm Depth DPZ-mobile: 505 mm
Dimensions in packaging:	117 x 18,5 x 34,5 cm
Weight:	8 KG
Installation:	Inside or covered outside
